### Ronzio, Robert A., PhD

1996 American Heart Association Dietary Guidelines, #165, p.40 The antioxidant defenses of adrenal glands decline during aging, #160, p.33 Antioxidant supplementation can decrease oxidative damage to lymphocyte DNA in smokers, #167, p.37 Antioxidants can block initiation of liver tumors induced in lab animals by a food carcinogen, #161, p.26 Antioxidants can help reduce the risk of repeated narrowing of coronary arteries after corrective surgery, #171, Antioxidants inhibit inflammatory activity of liver defensive cells, #178, p.50 Aspirin can decrease chronic inflammation and lower the risk of myocardial infarction and stroke in healthy men, #169, p.50 Beta carotene can stimulate immune functions in cigarette smokers, #177, p.49 Broccoli can selectively activate liver detoxication enzymes, #163, p.41 Carotenoids can increase the efficiency of vitamin E as an antioxidant and vitamin C can regenerate oxidized carotenoids, #171, p.35 Carrot juice & orange juice can raise plasma levels of beta carotene & vitamin C and partially protect against LDL oxidation in smokers, #165, p.38 Certain US populations are at risk of antioxidant deficiencies, #159, p.35 The consumption of alcohol and high levels of synthetic beta carotene may increase cancer risk, #166, p.46

Consumption of soy protein decreases blood lipids, #157, p.30 Damaged mitochondria can cause chronic disease, #163, p.42 Defining Nutraceuticals, #163, p.41 Dietary carotenoids may lower the risk of cardiovascular disease, #160, p.31 Dietary flavonoids inhibit thyroid peroxidase in vitro, #157, p.32 Dietary supplements may increase the production of proteins protecting against oxidative stress, #162, p.32 Do selenium supplements reduce the risk of cancer?, #166, p.46 Do vegetarians consume enough antioxidants?, #157, p.33 Does vitamin C lower the risk of cataracts?, #173, p.59 Drinking tea may lower the risk of lung cancer, #157, p.31 Elderly people consuming typical Western diets may be at risk of riboflavin and vitamin B6 deficiency, #178, Enhanced mitochondrial redox balance can protect against exposure to chlorinated hydrocarbons, #175, p.46 Estrogen can protect bones by inducing programmed cell death, #172, p.38 An explanation of possible therapeutic effects of turmeric, #171, p.34 The FDA approves a health claim relating to a specific food for first time, #167, p.38 First approval of a genetically engineered fruit, #167, p.39 Flavonoid consumption among Europeans reduces the risk of coronary artery disease, but not the risk of cancer, #159, p.34 Flavonoids can function as antioxidants in oxidation of low density lipoprotein (LDL) in-vitro, #159, p.34 Flavonoids can stop the growth of immortal cells and induce programmed cell death via a common regulatory protein, #172, p.37 Flaxseed oil and fish oil can decrease the production of cytokines that trigger inflammation, #160, p.32 Free radical damage is implicated in alcohol-related pancreatitis, #167, p.39 The free radical superoxide plays a key role in intracellular signaling, #171, p.34 The French Paradox continues: Resveratrol in red wine can limit inflammation, block mutations and inhibit growth of tumor cell lines, #169, p.52 Functional foods may require extensive testing to establish their safety, #168, p.62 Gamma oryzanol decreases fatty streaks in arteries of animals fed high saturated fat, #173, p.58 Gamma tocopherol blocks certain mutagenic agents more effectively than alpha tocopherol, #168, p.60 Genetic engineered cells can produce active principles of important herbs, #177, p.49 Genetically engineered plants can increase protein quality and sweetness, #165, p.39 Ginkgo biloba extract prevents programmed cell death (apoptosis) in nerve cells, #175, p.46 Glutamine can indirectly enhance tissue antioxidants, #173, p.59 High calcium supplementation in older women can increase zinc requirements, #177, p.49

A high intake of vitamin C may protect against the progression of osteoarthritis, #162, p.30

A high intake of vitamin E may slow the progression of Alzheimer's disease, #168, p.60 How can the food industry communicate health benefits to consumers?, #162, p.31 Human milk provides multiple carotenoids, #169, p.52 Immune cells exhibit less DNA damage after supplementing with antioxidant vitamins, #166, p.47 Inadequate dietary methyl donors lead to oxidative stress and decrease liver antioxidants and tissue vitamin A levels, #177, p.48 Incorporating a methionine-rich nut protein into transgenic soybeans simultaneously introduced a potent nut allergen, #165, p.40 Increased cellular glutathione blocks programmed cell death in activated neutrophils, #172, p.36 Increased dietary fat, but not antioxidants, may characterize diets of patients with Parkinson's disease, #157, p.32 Increasing Trace Minerals in Grains to ease Worldwide Malnutrition, #163, p.40 Inflammatory bowel disease causes oxidative stress and depletes antioxidant defenses, #178, p.51 Intestinal uptake preferentially selects lutein and zeaxanthin from mixed natural carotenoids, #174, p.47 Inulin supplements can improve gut flora and bowel transit time, #173, p.58 Large scale use of transgenic crops in the US enters its second year, #168, p.62 Levels of key antioxidant enzymes change during aging and their levels in organs correlate with the extent of oxidative damage, #161, p.25 Limitations of clinical trials in studying the role of antioxidants and other nutrients in prevention, #163, p.40 Long term supplementation with beta carotene can enhance natural killer cells, #174, p.47 Low consumption of flavonoids may increase the risk of heart disease, #157, p.33 Low dose antioxidant vitamins and minerals improve nutritional status of hospitalized, elderly patients, #174, A low intake of antioxidants is linked to an increased risk of cervical lesions, #162, p.30 Low levels of glutathione in T cell subsets are linked to decreased survival rates for HIV-positive individuals. Low levels of lycopene related to macular degeneration, #160, p.32 Maitake mushroom can improve cholesterol and lipid status, #174, p.46 Manipulation of plant genes to improve plant quality, #166, p.46 Mushroom polysaccharides can enhance defensive cell responses by triggering the production of nitric oxide, Natural beta carotene is a more effective antioxidant than synthetic beta carotene in humans, #160, p.32 Only 20% of children in the US consume five or more servings of fruits and vegetables daily, #161, p.24

Oral supplementation with synthetic beta carotene may not lower the risk of cardiovascular disease or cancer,

Oxidants and antioxidants may regulate defensive cells during inflammation, #172, p.36 Oxidative stress accompanies heart burn due to stomach acid, #157, p.32 Oxidative stress depletes stomach cells of glutathione, #173, p.58 Oxidative stress is linked to inflammatory bowel disease, #167, p.38 Pantothenic acid indirectly functions as a cellular antioxidant, #161, p.25 Patients with coronary heart disease have lower levels of gamma tocopherol, but not alpha tocopherol, #168, Phytochemicals in turmeric scavenge nitric oxide, #172, p.37 Phytonutrients represent an emerging market, #161, p.24 The plant flavonoid guercetin can inhibit proliferation and induce differentiation in cultured leukemia cells. Position of the American Dietetic Association on phytochemicals and functional foods, #159, p.35 A primary role of vitamin C: the protection of tissue membranes from free radical damage, #175, p.47 Proanthocyanidins and tannins reduce inflammation by blocking key enzymes of synthesis of regulatory lipids, #174, p.46 Products of oxidized fatty acids can stimulate the production of defensive enzymes in normal liver cells, #173. Quercetin and vitamin C work together to help protect the skin from oxidative damage, #171, p.34 Red wine may not lower the risk of cardiovascular disease as compared with white wine, #157, p.30 Red wine solids reduced tumor onset in transgenic mice with increased susceptibility to spontaneous tumors, Reduction of DNA damage by Brussels sprouts, #159, p.34 Respiratory tract antioxidants are a first line defense against environmental toxins, #166, p.47 Selenium and beta carotene supplementation may increase antioxidant defenses in HIV positive individuals. Supplementation with antioxidants may not reduce oxidative damage to DNA in smokers, #167, p.37 Supplementation with fructooligosaccharide improves the status of colonic flora, #159, p.36 Supplementation with mixed carotenoids supplementation can overcome suppression of immune function from a low carotenoid diet, #178, p.51 Taurine can prevent endothelial cell apoptosis, #178, p.50 Terpenoids, a class of lipid nutriceuticals, can promote wound healing, #175, p.47 Today's functional food consumer is informed, educated and she is more willing to recognize health benefits of foods than before, #171, p.36

A typical Western diet supplies about 40 milligrams of key flavonoids daily, #178, p.51 Vitamin B6 deficiency can promote oxidative stress after exhaustive exercise, #175, p.46

Vitamin C may protect against peroxynitrite-induced damage associated with inflammation, #172, p.36 Vitamin E lowers the risk of heart attack in patients with coronary disease, #160, p.31 Vitamin E may decrease the risk of angina, #157, p.31 Vitamin E supplementation boosts the immune response in elderly people, #169, p.50 Vitamin E supplementation can reduce the severity of tardive dyskinesia (TD), #161, p.26 Vitamin E supplements decrease oxidative stress associated with everyday living in healthy volunteers consuming a well balanced diet, #175, p.47 What happens to surplus dietary vitamin C?, #177, p.48 Zinc deficiency may increase arterial oxidative stress, #174, p.46
